Rounds Tracker

Views

Rounds Tracker offers five ways to view your data. For most data items, you can view detail information by moving the cursor over the appropriate cell.

Although it is not a real-time application, Rounds Tracker can be set to refresh the display periodically, or you can refresh the display manually.

21	A2, ROOM 1		1/26/2006	12:45 AM			13 - ASLEEP												

The Details view shows each location read and any related incidents.

Rounds Tracker's method of color-coding cells allows you to quickly identify any exceptions or missed locations.

15

Green text in a cell indicates the location was visited within the time range you specified.

16

Red text and an orange background means the location was visited outside your desired time range.

15

A spotted background in a cell indicates that there is a related incident or observation.

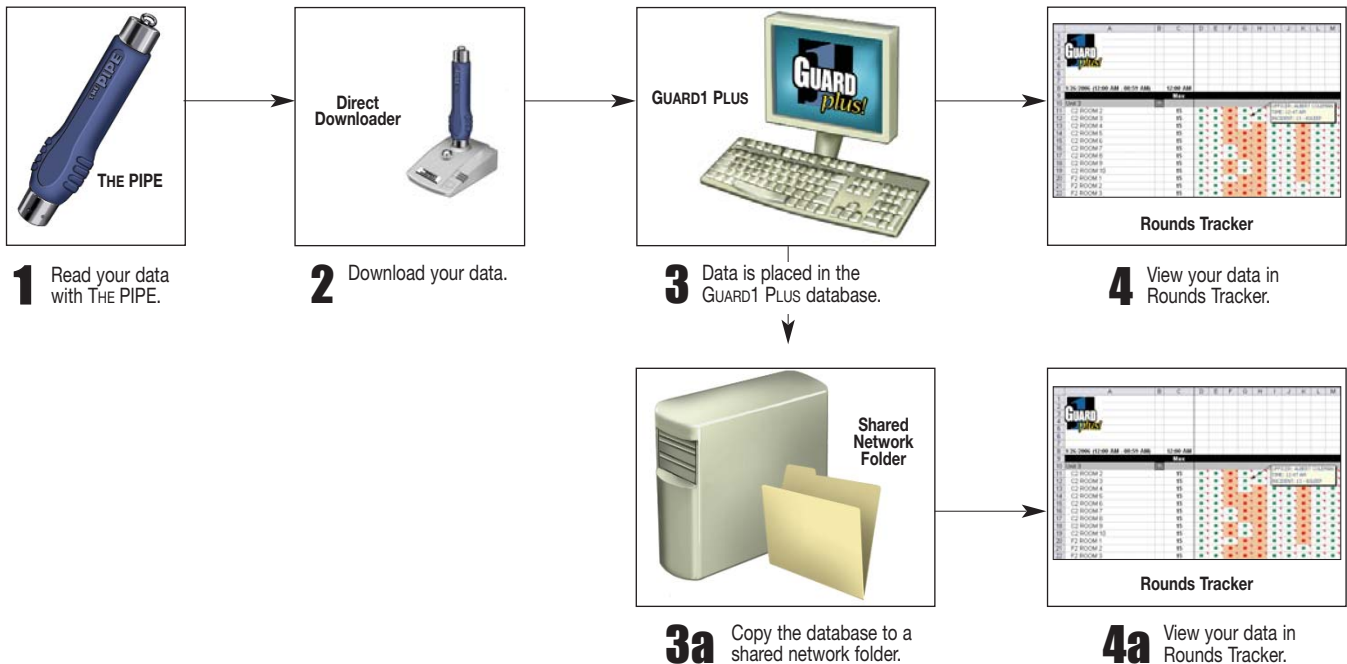

A red triangle in the corner of the cell represents additional detail.

How Data is Transferred to Rounds Tracker

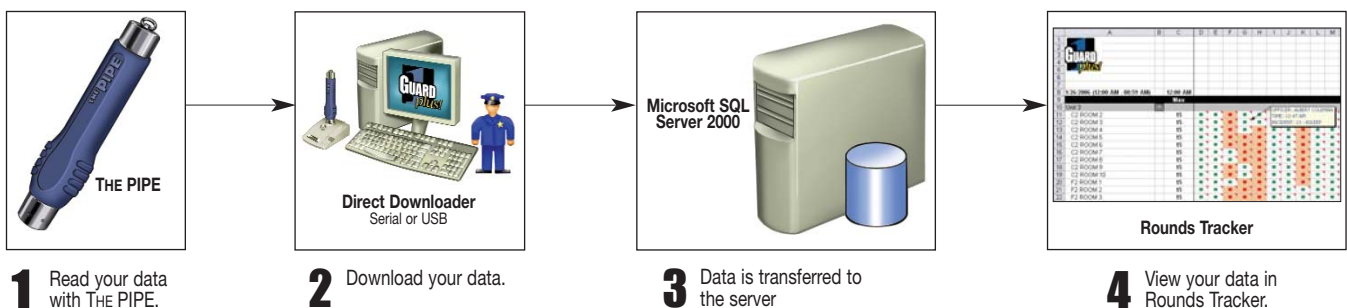

GUARD1 PLUS Professional Edition

GUARD1 PLUS MSDE Edition

Rounds Tracker works with any data collected by THE PIPE. It takes its data from any Guard1 Plus database.

GUARD1 PLUS Server Edition

System Requirements

Because Rounds Tracker is a computation-intensive application, it is important to use a computer which meets or exceeds Rounds Tracker's minimum requirements. We recommend that Rounds Tracker be installed and configured by an IT or Network Administrator.

The system requirements for Rounds Tracker are:

- 2.66 GHz processor
- 1 GB of RAM
- 1.5 GB of hard drive space.
- A CD-ROM or DVD drive is required for installation only
- Windows 2000 with Service Pack 4, or Windows XP with Service Pack 1.
- Rounds Tracker reports can be emailed. For email support, Microsoft Outlook must be installed and configured prior to use.
- Minimum display settings of 256 colors at a resolution of 800x600 pixels. For best results, your display should be set to 32-bit color at a resolution of 1024x768 pixels.
- To use Rounds Tracker, you must have GUARD1 PLUS Professional, MSDE, or Server Edition along with Excel 2000 or higher.

Rounds Tracker

Overview

Rounds Tracker was initially developed for correctional use, to meet the need to review large amounts of data, with many patrols and button reads. Rounds Tracker can display large amounts of data in a single view, and its color-coded system simplifies the identification of locations which were missed or visited late.

Rounds Tracker is ideal for cell checks, where each cell must be visited within a specific minimum or maximum number of minutes after the previous visit. It will detect and display any visits which violate or fail to meet the limits you specify. It can also determine exceptions based on a required number of visits per hour.

As a companion application for GUARD1 PLUS, Rounds Tracker can be used at the same computer as GUARD1 PLUS, or at a remote computer. When used at a remote computer, Rounds Tracker takes its data from a copy of the GUARD1 PLUS database, placed in a shared network folder by the Data Maintenance Scheduler.

Rounds Tracker displays patrol information in Microsoft Excel 2000 and higher. You can save a view, creating a "snapshot" of your data, or you can e-mail a copy to another person.
