# Solutions Guide

GUARD1

What solutions do you need?

"We have mandated compliance and regulations."

Whether you require proof of **well-being checks** for individuals in your care or custody, **inspections** of fire equipment or exit signage in your building, or **services** like staff training, medical visits or recreation, Guard1 does that! You'll see the results in real time, with alerts to your supervisors if any mandated tasks are missed.

"We need to protect our staff."

Personal protection devices are part of the Guard1 Real Time system.

Equip your staff with the Guard1 Duress Device. It's easy to use, with a big red panic button for **emergency signaling**. Your alerts are sent to a control room monitor with the zone **location** of the staff member.

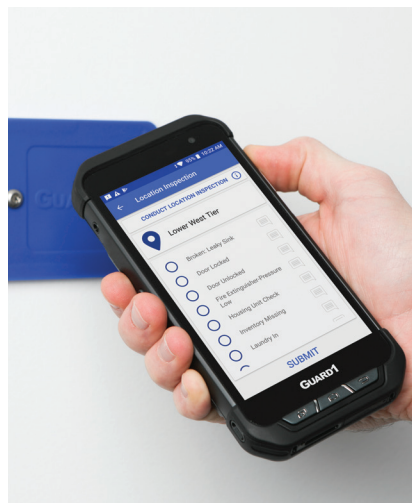

"We want to monitor and document tasks."

Guard1 Real Time provides a **task list** on the SuperMAX mobile device carried by your staff. Confirm **proof of presence** with RFID wristbands worn by individuals or RFID wall mount tags. Guard1 manages all types of tasks – including those you define – such as well-being checks, activities such as recreation or medical visits, and handouts like meals or supplies, and much more.

"We need a simple, durable system."

The PIPE is **super-rugged** and easy to use. Officers or staff touch The PIPE to a checkpoint button to record their presence. Time and location are recorded, giving you accountability and documenting your compliance.

"We need to make our staff more efficient."

Is your team spending unnecessary time on documentation? Forgetting required tasks? Achieving less than 100% accuracy? GUARD1 gives you reliable **task management** with **staff reminders**. Manage your required tasks and confirm that they were completed, automatically, with **alerts** for anything missed by your staff.

"We need to know where people are, 24x7."

GUARD1 Real Time supports **tracking of people and things** within your facility. Active Beacon Tags send a signal once per second to GUARD1 Receivers within your facility. The GUARD1 location engine determines the **zone location of individuals, automatically, 24 hours a day**. That means **virtual headcounts, out-of-bounds detection, and keep-separates** are also available, automatically, with no extra effort by your staff.

"We have simple needs and a budget to match."

GUARD1 systems are available in a wide range of sizes and configurations. Our GUARD1 EasyTour system, for guarding requirements of less than 25 checkpoints, is our smallest system. For correctional and behavioral health applications, we have provided systems for facilities with as few as four beds.

GUARD1 Features

Patrols

Whether you call them rounds, patrols, checks, or guard tour GUARD1 has been doing them, for over 100,000 companies and organizations, for nearly 30 years.

Inspections

GUARD1 devices document the time of your visit to a location, with the capability to add optional observations. You can keep notes for your maintenance team, fire equipment status, cell searches in a correctional facility, boiler temperature, AED checks – anything you inspect.

Staff Safety

If you need to protect your staff with a personal alarm device, the GUARD1 Duress Device provides emergency signaling with the press of a button. Configurable secondary alerts can signal "man down" situations or detachment from a belt or holster.

On-Premises

All GUARD1 software supports on-premises deployment. Whether you are using a small system deployed on a workstation, or a large enterprise system deployed on an on-premises server, GUARD1 gives you the option.
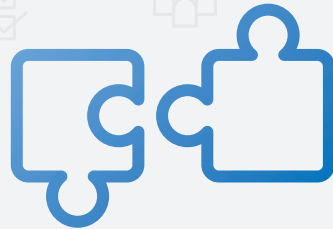

Cloud

GUARD1 Real Time is available with secure hosting in Azure Cloud. Our hosted offering includes a Business Intelligence Dashboard and authentication using single sign-on (SSO).

Modular and upgradeable

If you only need a few of these features, it's nice to know that the GUARD1 Real Time system can be customized, upgraded, and expanded to scale with your facility's evolving needs.

Alerts

GUARD1 Real Time uses rules you create to determine when there are alert conditions. These can be almost anything, from late or missed checks, to patient or offender status, to emergency signals from a personal alarm.

Notifications

Any alert in GUARD1 Real Time can also initiate a notification via text message or e-mail. Supervisors can be notified when a check is missed, for example, or administrators can be notified for emergency alerts.

GUARD1 Features

Real Time location

With receivers installed in your facility, GUARD1 becomes a real time tracking system. You'll always know the location of individuals – patients, offenders, staff – and things – equipment, tools, keys. It's completely automatic, 24x7.

Compliance

Simplify management of compliance requirements, inspections or audits. GUARD1 simplifies your entire compliance process – from setting up requirements, to performing inspections, to reporting. Customers tell us that compliance reports – that once took them hours or days to prepare – now take them minutes.

Proven Accuracy

GUARD1 is the only system tested and reviewed by an independent organization. BetaGov, in cooperation with the Nebraska Department of Corrections, tested the GUARD1 system and found it to be 100% accurate.

Checks

Whether your staff makes checks for well-being in corrections or healthcare, or security patrols for building maintenance, or slip-and-fall checks in a retail store, GUARD1 provides documentation to prove that your checks were made, correctly and on time.

Headcounts

If you do headcounts, GUARD1 makes them simple. GUARD1 integrates with your JMS, OMS or other management system, so it knows who is assigned to a housing area. Scanning wristbands or ID badges in a unit confirms who is present, in just minutes.

Activities and Handouts

Activities or handouts are anything you define – showers, recreation, meals, or anything you want to track. GUARD1 records and confirms that they happened, and when.

GUARD1 is a comprehensive management system for corrections, behavioral healthcare, and commercial security
